Portfolio: carolinemaymaguirecmm.github.io/carolinemaymaguirecmm

SUMMARY

Senior technical writer with 9 years of experience documenting developer tools, APIs, and SaaS platforms. I own docs-as-code end to end: I write the content and maintain the infrastructure behind it, including GitHub Actions workflows that lint, build, test, and deploy documentation to GitHub Pages. I build AI automation that keeps documentation in step with the product, including a GitHub Agentic Workflow that opens documentation PRs when the code changes, Claude Code skills, and public Claude Code plugins. MSc in Software Design with Artificial Intelligence.

WORK EXPERIENCE

Senior Technical Writer – Embedded Developer Tools

Sep 2024 – Present

Analog Devices

- **Technical documentation:** Own developer-facing documentation for CodeFusion Studio, an open-source embedded development platform, including user guides, CLI workflows, API references, tutorials, release notes, and videos. Authored 300+ pull requests.
- **Docs infrastructure and CI:** Built and maintain GitHub Actions workflows that automatically lint, build, test, and deploy every documentation build to GitHub Pages. Publish multiple versioned documentation releases.
- **Agentic documentation workflow:** Built a GitHub Agentic Workflow (gh-aw) that detects codebase changes and opens PRs updating the documentation, release notes, and changelog for writer review.
- **Claude Code skills and plugins:** Created repository Claude Code skills for style-guide checks and for scoping each release's documentation from Jira and Jama. Publicly distribute Claude Code marketplace plugins that let users query the documentation and run complete end-to-end command-line workflows.
- **AI discoverability:** Implemented answer engine optimisation (AEO) for the documentation, including llms.txt and llms-full.txt, so AI assistants can find and accurately cite product content.
- **Pre-release testing:** Research product specifications and test pre-release builds against the documentation in Docker containers, virtual machines, and local environments. Work with the QA team each release so documentation supports their test plans.
- **Collaboration and user validation:** Work daily with embedded software engineers and product teams across Asia, Europe, and the US. Run user validation with developers to confirm documentation supports real workflows and reduces onboarding friction.
- **AI-assisted reviews:** Use Claude Code and GitHub Copilot for drafting, code review, and PR review, improving quality and reducing turnaround time.
- **Customer-facing content:** Contribute marketing copy, sales training content, and UX writing.

Technical Writer and Product Owner – SaaS / API Integrations

Feb 2022 – Aug 2024

Oomnitza

- **Documentation:** Built the complete product documentation suite from scratch for a SaaS asset management platform, using MadCap Flare for HTML content and Markdown on GitHub in a docs-as-code workflow.
- **APIs:** Tested and documented REST APIs and integrations using Postman, Swagger, and cURL.
- **Style guide:** Established and enforced the documentation style guide.
- **Product ownership:** Gathered requirements, designed features and UI labels in Figma, managed the Jira backlog and sprint planning, and led a major product release across Product Management, Support, Customer Success, and Engineering.
- **Troubleshooting and support:** Reproduced bugs on Linux and Windows and documented workarounds. Handled internal and customer documentation requests through Zendesk.
- **Portal maintenance:** Maintained the documentation publishing portal using HTML, CSS, JavaScript, and Python.

Cloud Consultant – EDI Integration

Mar 2020 – Jan 2022

OpenText

- **Documentation:** Created and maintained implementation guides, help content, design documents, and technical specifications.

- **Development:** Developed C# applications and used mapping tools to configure XML documents to EDI standards. Built and customised supplier web portals using HTML, CSS, JavaScript, and SQL.
- **Configuration and support:** Configured OFTP, SFTP, AS2, and HTTP for secure data transmission, and supported customers through ServiceNow.
- **Process:** Managed version control in Git and SVN, and ran Agile project work in Jira and Confluence.

Technical Writer – Configuration Tools for Embedded Devices

Aug 2017 – Feb 2020

Johnson Controls

- **Lead writer:** Led help content, installation guides, and release documentation for Metasys Tools, including the System Configuration Tool for Metasys building automation software. Progressed from Graduate Technical Writer to Technical Writer III.
- **DITA migration:** Member of the team that migrated Tech Comms content to DITA/XML across the organisation, improving consistency and streamlining publishing.
- **Structured authoring:** Authored DITA/XML content in Oxygen, XMetaL, FrameMaker, and Documentum, with version control in SVN and later Ixiasoft CMS. Trained colleagues on DITA/XML publishing and troubleshot build and output errors.
- **Publishing portal:** Worked with the web team to test and maintain the Fluid Topics publishing portal using CSS, JavaScript, Python, and SQL.
- **Agile delivery:** QA tested software builds and their content, and wrote Jira user stories that met Definition of Done and Acceptance Criteria, working with international engineering and design teams in Scrum and Kanban.

SKILLS

- **Docs-as-code and CI:** Markdown, MDX, Git, GitHub, GitHub Actions, GitHub Pages, Docusaurus, MkDocs, YAML, Pandoc
- **AI documentation automation:** GitHub Agentic Workflows (gh-aw), Claude Code skills and plugins, GitHub Copilot, llms.txt, answer engine optimisation (AEO)
- **Developer and API documentation:** REST APIs, OpenAPI/Swagger, Postman, cURL, CLI documentation
- **Testing and environments:** Docker, AWS EC2, Jenkins, virtual machines, Linux, Windows
- **Programming:** Python, Java, JavaScript, C#, SQL, HTML/CSS
- **Structured authoring:** DITA/XML, Oxygen XML Editor, FrameMaker, MadCap Flare
- **Tools and process:** Jira, Jama, Confluence, Zendesk, Figma, Agile (Scrum, Kanban)
- **Content:** Content strategy and audits, style guides, UX writing, cross-functional collaboration with product, engineering, and UX

EDUCATION

- **Professional Diploma in UX Design** – UCD Professional Academy / UX Design Institute, 2025 – 2026
- **MSc in Software Design with Artificial Intelligence** – Technological University of the Shannon, Athlone, 2023 – 2024. Modules included Java OOP I and II (aligned to Oracle OCA/OCP), Python, machine learning, and neural networks.
- **Higher Diploma in Computer Science** – Atlantic Technological University, Sligo, 2016 – 2019
- **MA in Historical Archives** – Maynooth University, 2013 – 2015
- **PhD in History** – Mary Immaculate College, Limerick, 2007 – 2011
- **BA in History and English** – Mary Immaculate College, Limerick, 2003 – 2007

PORTFOLIO

- **CodeFusion Studio User Guide** (Analog Devices) – developer.analog.com/docs/codefusion-studio
- **CodeFusion Studio repository and CFS Skills plugin** (Analog Devices) – github.com/analogdevicesinc/codefusion-studio (plugin: packages/cfs-skills)
- **CFS Plugins repository** (Analog Devices) – github.com/analogdevicesinc/cfs-plugins
- **VS Code Marketplace listing** (Analog Devices) – marketplace.visualstudio.com, AnalogDevices.cfs-ide
- **Oomnitza User Guide** – oomnitza.zendesk.com/hc/en-us
- **Oomnitza Connector API repository** – github.com/Oomnitza/oomnitza-connector
- **Metasys System Configuration Tool Help** (Johnson Controls) – docs.johnsoncontrols.com
- **Portfolio site**, built with Docusaurus, with CI link checks and a custom llms.txt plugin – carolinemaymaguirecmm.github.io/carolinemaymaguirecmm
